### **Examiner's Statement of Reasons for Allowance**

Claims 2-7, 9-13, 15-19, 21-25, 27-34 are allowed over prior art.

The following is an examiner's statement of reasons for the indication of allowable claimed subject matter.

None of the prior art of record, either taken by itself or in any combination, would have anticipated or made obvious the invention of the present application at or before the time it was filed. The subject matter regarded as allowable by the examiner is found in claims 5, 11, 17, 23, 29, 32-34, wherein an encryption key is steganographically embedded in at least one unit, "wherein the at least one first unit and the at least one second unit are encrypted and each carries a portion of the encryption key".

Dependent claims 2-4, 6-7, 9-10, 12-13, 15-16, 19, 21-22, 24-25, 27-28, and 31 are also allowed by virtue of their dependencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **Conclusion**

Prior arts made of record, not relied upon:

US Patent 4,535,355 to Arn et al. is directed methods and apparatus for scrambling and unscrambling a plurality of data streams having differing data, on a plurality of signal channels, are taught. The data streams may be television programs or other signal information, transmitted in a frame-by-frame manner with discrete synchronizing

information, and where some of the data streams may be high priority such as pay-TV program material. All of the data streams are synchronized, an encryption key code is imposed on them, and a data package containing an identifier code for each data stream and a routing code is generated, so that each data stream is assigned at any instant of time to a specific one of the plurality of signal channels. The data package is encrypted in each data stream by being inserted at a specific place therein relative to the synchronizing information. At any authorized receiver the encryption key code is captured and used to decrypt the encrypted data package so as to decode the identifier and routing codes thereof, whereby a given data stream may be tracked no matter on which transmitted channel it appears at any instant of time.
